New AZO Review

Construction Progress:

- Installation of terrazzo in front of rental car counters and in the boarding area nears completion
- Installation of built-in cabinets in office spaces has begun
- Application of final coats of paint has been completed in many areas
- Installation of restroom fixtures
- Installation of Passenger Boarding Bridges has begun

100 Days until opening day!

The new terminal is scheduled to open in 100 days, on April 27th. There are still a lot of things to do, but construction, transition, and operations teams are working diligently to meet this goal.

In February, Chrysalis will release details about testing, simulations, orientation, and training plans.

In March, expect to see information on testing, simulations, and training.

In April, orientation, additional training, and physical move activities will occur.

Flooring installation in front of the rental car and limousine rental areas has begun. Areas of the lobby not covered by terrazzo will be carpeted.

Cabinets and counters are being installed in office spaces.

Open House

A public open house event is scheduled for April 16th.

The community is invited to visit the terminal, explore the new facility, see the new systems and equipment, and enjoy family-friendly entertainment, activities, and refreshments.

More details about the times, scheduled entertainment, and door prizes will be shared as they are confirmed.

Enclosing the ductwork.

Rumor has it...

This week's rumor:

Discover Kalamazoo will not staff the information desk in the new terminal.

The fact of the matter: In cooperation with the airport, Discover Kalamazoo will staff

the new desk with a more formal presence. You may notice some of the current volunteers participating in simulations, training, and open house events.

The information desk will be located in the bag claim and rental car lobby of the new terminal.

New exit lane technology

The new Kalamazoo/Battle Creek International Airport terminal will feature the first US installation of FlipFlow exit lane doors by Great Lakes Automatic Door. Popular in Canada and overseas, this system quickly and safely allows passengers to leave the boarding area. Rather than a revolving door between the boarding area and Meeter/Greeter hall, the new terminal will feature a

The triple-lane FlipFlow doors will be installed to create the exit lane for passenger traffic.

triple-lane unit to handle arriving passenger traffic.

Each lane will have doors at the boarding area side and the non-secure side. These lanes have sensors that, when combined with security cameras, can analyze the traffic and trigger alarms if items are left in the unit or if traffic attempts to move in the wrong direction.

Counters for airline gates are on-site. Ticketing and rental car counters are scheduled to arrive soon.

Passenger Boarding Bridges have been delivered

Passenger Boarding Bridge installation has begun. In this photo, the first sections, the rotunda and column, have been installed. It will take five weeks to install and test the five new bridges.

Interior of the Passenger Boarding Bridge's tunnel, prior to installation.

By the numbers

There are 82 CCTV cameras planned for the new terminal.

Passenger Boarding Bridges began arriving last week.
